| Target version: | | OS: | Any |
| Version: | 0.13.1 | | |

Description

All the minimize to tray functions (on close, on minimize etc.) should be disabled on Mac OS X.

- 1.) it doesn't bring the benefits it has on windows as the App still remains in the Dock.
- 2.) similar effect has the default Mac OS X short cut Cmd-h
- 3.) once the app has been minimized to the tray there is *NO* way to restore it.

Therefore:

disable or better hide the settings for this feature and deactivate it's functionality on Mac OS X.
