

Quassel IRC - Bug #103

Treat global messages correctly

02/14/2008 12:04 PM - EgS

Status:	Closed	Start date:	
Priority:	High	Due date:	
Assignee:	EgS	% Done:	0%
Category:	Quassel Core	Estimated time:	0.00 hour
Target version:	0.2.0-alpha1	OS:	Any
Version:	0.13.1		
Description			
They seem to be correctly recognized as a Querytype but the sender is not set correctly. (i.e.: \$*)			
Additional information:			
3.3.1 Private messages			
Command: PRIVMSG			
Parameters: <msgtarget> <text to be sent>;			
PRIVMSG is used to send private messages between users, as well as to send messages to channels. <msgtarget> is usually the nickname of the recipient of the message, or a channel name.			
The <msgtarget> parameter may also be a host mask (#<mask>) or server mask (\$<mask>). In both cases the server will only send the PRIVMSG to those who have a server or host matching the mask. The mask MUST have at least 1 (one) "." in it and no wildcards following the last ".". This requirement exists to prevent people sending messages to "#*" or "\$*", which would broadcast to all users. Wildcards are the '*' and '?' characters. This extension to the PRIVMSG command is only available to operators.
