

Quassel IRC - Bug #1228

Quassel responds to non-Quassel notifications

05/24/2013 10:57 PM - EliDupree

Status:	Resolved	Start date:	05/24/2013
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		OS:	Linux
Version:	0.8.0		
Description When I click one of Quassel's popup notifications for a highlight, it takes me directly to the highlighted line, which is nice. But when I click on any other program's notification, the Quassel window comes to the foreground anyway - or, if the Quassel window is already in the foreground, it disappears (Quassel keeps running, but I have to click its icon in the notification area to get it back - or, oddly, click any other popup notification.) I was able to repeat this simply by using the command-line \$ notify-send "foo" and then clicking on the notification generated. Window manager: XFCE OS: Debian wheezy

- Status changed from New to Resolved

I am unable to reproduce this issue on Fedora 34, running Quassel 0.13.1.

I suspect that at some point, this was fixed without realizing, perhaps the result of a code overhaul.

I'm going to close this issue, but if you continue to have this issue please feel free to reopen it.
