Tray icon in GTK Desktop Environments

07/27/2013 04:57 AM - phunguy

Version:	0.9-pre		

Description

Hello all, I have tested this on XFCE 4.10/Unity/Gnome. 0.8.0 version has a working tray icon in any DE, but 0.9.0 only works in KDE. I seem to notice this behavior regardless of what distribution I try.. Arch/Fedora/Ubuntu all show the same symptoms.

Basically 0.9.0 does not have a tray icon that works in anything except KDE. Thank you for any assistance that can be provided.

History

I'm an idiot. I am not sure what happened when I tested before, but this issue seems to be Ubuntu-related, with their indicator-application package. I removed it, and the tray icon started working. I have filed a bug report with Ubuntu, and the link is:

<https://bugs.launchpad.net/ubuntu/+source/quassel/+bug/1205903> - I apologize for filing a potentially unnecessary bug.
