

Quassel IRC - Bug #1293

--syslog option writes to emergency level in rsyslogd.

06/19/2014 03:16 AM - cyborgshadow

Status:	Closed	Start date:	06/19/2014
Priority:	Normal	Due date:

Target version:		OS:	Any
Version:	0.10.0		
Description			
<p>Using Quassel Core 0.10.0 on an RHEL6 or CentOS 6 server, which now default to rsyslogd, all quassel core log messages end up getting sent to STDOUT when the --syslog option is used.</p> <p>In order to squelch them, I had to turn off emergency messages by editing /etc/rsyslog.conf and commenting out the line: *.emerg *</p> <p>which removes all emergency messages.</p> <p>This is not an ideal situation but was the only way to squelch the messages. Please log to syslog on a non-emergency level.</p>
