

Quassel IRC - Feature #1327

The search box should search the complete log

Description When I look for a phrase, the search box currently looks for it in the currently fetched part of the buffer. It probably should search the complete channel log instead and <i>filter</i> the result. (This is closely related with issue #1083 , but that one probably refers to a separate dialog, while I'd like to be able to filter within an active buffer).
