Quassel IRC - Feature #1337

Support for using two cores at once

Description

In my day-to-day work, I need to be connected to both Freenode, and an internal IRC network only available over a VPN. It's not possible for me to run a core that can handle both (if the core is outside the VPN, it can't connect to internal IRC; if the core is inside the VPN, I can't connect to it from, say, my phone or cafe wifi easily).

It would be great if the Quassel client supported two connections at once, so I could run a core on the public internet for Freenode, and a second core inside the VPN for when I'm working. In my use case, there's no channel or network overlap, just for clarity.

Thanks!

This would help me in the very same scenario.

I'm in a very similar situation. This would really be useful.
