Target version:		OS:	Any
Version:	0.11-pre		
Description			
<p>For example http://example.org/bar'baz only highlights (and makes clickable) http://example.org/bar and not the whole url.</p> <p>It seems this was correct at some point but got broken in [0].</p> <p>While the removal of "[" and "]" in this commit was correct, according to [1] the "" (single quote) is fine.</p> <p>[0] also references RFC 2396 which should be superseded by RFC 3986, but it's kind of hard to define as [2] (a Firefox bug) was arguing to and fro for years over "" versus "%27" (related, but not a parser bug per se).</p> <p>[0]: http://bugs.quassel-irc.org/projects/quassel-irc/repository/revisions/c1559056803360cc528c578e3458a0bae33bd56c [1]: https://url.spec.whatwg.org/#url-code-points [2]: https://bugzilla.mozilla.org/show_bug.cgi?id=1040285</p>
