#### Description

It would be useful to be able to configure the allowed TLS cipher suites for both quassel-to-IRCD connections and for quassel-client to quassel-core connections.

This can be done through `QSslConfiguration::setCiphers`. I suspect the bulk of the work for this would be the UI plumbing.

An example of how this is done can be found in Mumble (another Qt app): <https://github.com/mumble-voip/mumble>  
Mumble's `murmurd` just reads from a config file, though. They don't plumb it through to any kind of graphical UI.
