Quassel IRC - Bug #1532

"Highlight Ignore Rule" is not working

08/11/2019 04:10 PM - Anonymous

Description

I configured under 0.13.1 a "Highlight Ignore Rule" with an empty "Rule" field, "RegEx" and "Enabled" are enabled and "Sender" is set to "*willikins*". Nevertheless messages in #gentoo-dev are highlighted from the bot "willikins" if my nickname ("toralf")is mentioned in its output:

<+willikins> https://bugs.gentoo.org/689614 "app-crypt/libnitrokey-3.5 : [TEST]   1 - runs (Failed)"; Gentoo Linux, Current packages; RESO, FIXE; toralf:soap

My quassel client runs at a hardened Gentoo Linux, the core is running at a remote Debian 10.

You've enabled Regex but aren't using proper Regex syntax. With Regex enabled, Rule should be ".*" (catch all) and a wildcard in the Sender field would be ".*" as well. For a basic 'all messages from a single sender' I would suggest: disable Regex, leave Rule blank, and set Sender to "willikins!*@*". Throw a '?' or '*' wildcard on either side of willikins if needed (alt nicks during splits/timeouts/etc).
