

Quassel IRC - Bug #1539

Notifications not shown nor sounded in Linux Mint 19.2

10/22/2019 06:30 PM - ad5xj

Status:	New	Start date:	10/22/2019
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		OS:	Any
Version:	0.13.0		
Description			
Settings configured to issue a sound and a message on notifications. however neither happen. I do get sound and messages on other applications (like Pidgin).			

History

#1 - 01/01/2020 05:28 PM - sudoman

I'm not getting any notifications from Quassel client 0.13.1 or the master branch on Debian 10 (with GNOME Shell). I'm currently using version 0.13.0 of Quassel core.

Thanks :)

#2 - 02/13/2020 02:38 PM - sudoman

I should mention that I have seen occasional flashing icon alerts on either Debian 10 or Trisquel 9 (Based on Ubuntu 18.04). So this might be working some of the time for some distros. I'm using Wayland on both. Thanks :)

#3 - 02/17/2020 11:20 AM - ricab

Notifications failing most of the time here too, on Ubuntu 19.10. A couple of other people confirmed they saw the same (one of them on the 20.04 dev version, I don't know about the other).

#4 - 02/17/2020 02:36 PM - sudoman

I should also mention that I'm using <https://extensions.gnome.org/extension/615/appindicator-support/> in Gnome shell on my Debian 10 machine.

#5 - 03/08/2020 12:48 AM - sudoman

Thanks for Quassel. It's a really great IRC client, even with this one bug that I ran into. :)

I'm using Gnome and Wayland on Debian 10. I also run Quasseldroid 1.2.23 on my phone.

Using Quassel Client 0.13.1 from Debian repos, and custom builds of master, I originally wasn't getting notifications. However when I ran either version from the command line, I would get notifications, but not otherwise. I decided to comment out the 'X-DBUS-ServiceName=org.quassel-irc.quasselclient' line in quasselclient.desktop, and I'm pretty sure that launching the application from the Gnome GUI worked. However when I put that line back, notifications started working regardless of how I try to launch Quassel.

I tried leaving everything installed in /usr/local/, removing just the binaries, and removing everything related to Quassel under /usr/local/. The version from Debian works regardless.

I also experimented with this on Trisquel 9 (based on Ubuntu 18.04) and Gnome / Wayland. I got notifications to work occasionally with version 0.13.1 and the help of the "The Kstatusnotifieritem/appindicator support" plugin, but in the end, I wasn't able to get notifications to work at all on that machine, even if Quassel Client wasn't running on the Debian machine. Occasionally the version on Debian didn't work, possibly related to the behavior of the Trisquel machine, but for the most part, it works in Debian.

Thanks again :)
