<b>Version:</b>	0.13.0		

#### Description

Ubuntu Studio 20.04 / XFCE desktop environment  
Quassel v0.13.1 (dist-3778a12)

When " **Configure Quassel > Notifications > Alert tray icon and** " option is set to **change color** mode, the app's status icon remains in red "active" state; it does not change color from green to red as intended when a message needs to be read.

However, upon changing this option to **blink** mode, the icon starts red like before, but blinks green/red when a message is received. Once the message read, the icon returns to non-flashing red.

This gives the initial impression that the icon's default state is reversed; however, this is not true, for if it was it would seem likely the icon would change to green in **change color** mode as well.
