

Quassel IRC - Bug #1729

Setup Wizard: Network name does not persist when adding/removing servers

06/20/2021 08:15 AM - phuzion

Status:	New	Start date:	06/20/2021
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Quassel Client	Estimated time:	0.00 hour
Target version:		OS:	Any
Version:	0.13.1		
Description			
<p>During the initial setup wizard, changes to the "Network name" field by the user do not persist. This forces the Network name to whatever the default is in networks.ini.</p>			
Steps to reproduce:			
<ol style="list-style-type: none">1. Install Quassel Monolithic2. Erase quassel-storage.sqlite, quasselcore.conf, settings.qss, etc, if they exist to trigger the Setup Wizard3. Start Quassel Monolithic4. Next through the Welcome and Setup Identity screens5. Change the "Network name" field from the default (either Freenode or Libera) to something else (I typically just put foo or test)6. Click Add, Edit or Delete. If clicking Edit, go in, make changes, and click Ok.7. Notice that the "Network name" field has reverted to its previous contents			
<p>The network name should not revert.</p>			
<p>Tested on version 0.13.1 and on git HEAD on Fedora 34 as of 6/20/2021.</p>
