

## Quassel IRC - Bug #1900

### Unable to use quassel to core on local network on macOS 15

12/25/2024 12:27 PM - reedy

<b>Status:</b>	Closed	<b>Start date:</b>	12/25/2024
<b>Priority:</b>	Normal	<b>Due date:</b>

<b>Target version:</b>		<b>OS:</b>	Mac OS X
<b>Version:</b>	0.14.0		

**Description**

macOS 15 seems to put restrictions on apps accessing devices on the local network, giving a popup to allow access.

There doesn't seem to be a way to manually allow an app (which feels like an oversight), and Quassel doesn't currently request the necessary permissions.

Which means I can't currently use my locally hosted quassel bouncer (as is)...

<https://apple.stackexchange.com/questions/475737/how-can-i-manually-allow-local-network-access-for-an-app>

The developer would have to update the app with a "multicast entitlement" so that it can be granted access by the user.

Or is it just macos being useless... And didn't show me this before?

After a reboot, it did... and it's working now...
