<b>Description</b>			
I noticed these two (random?) crashes with git.			

### History

#### #1 - 10/10/2008 08:57 PM - mikkoc

The first crash is still happening with today's git.  
I haven't seen the second for a while now.

In addition I got a new one, I'll upload the backtrace.

#### #2 - 10/13/2008 02:29 AM - EgS

The first one doesn't contain enough information... :/  
The second one is fixed in current git.  
The third one is a known issue, sadly it's rare and I couldn't find out the proper reason

two very important general notes:

- 1) Please open for different crashes separate BRs, that makes it easier to mark/manage those issues.
- 2) if you can reproduce an issue, try to start quassel from a terminal. A Q\_ASSERT might have triggered and their output is only on stderr but not in those backtrace files. An indicator for an assert is this call sequence:

```
1. 4 libc.so.6      0x00007f0a18ee2630 abort
2. 5 libQtCore.so.4 0x00007f0a1b7613a5 qt_message_output(QtMsgType, char const*)
3. 6 libQtCore.so.4 0x00007f0a1b7614e7 qFatal(char const*, ...)
```

#### #3 - 10/21/2008 08:07 PM - mikkoc

Uploaded another backtrace, but it looks very similar to the first.  
Anyway, I get this crash very very often.

#### #4 - 10/21/2008 08:12 PM - mikkoc

Ok, sorry.  
Here's the output:

ASSERT failure in QVector<T>::at: "index out of range", file ../../include/QtCore/../../src/corelib/tools/qvector.h, line 323
