

Quassel IRC - Bug #387

Core session sometimes hangs with invalid data from socket

11/04/2008 12:02 AM - Sputnik

Status:	Resolved	Start date:	
Priority:	Urgent	Due date:	
Assignee:	EgS	% Done:	0%
Category:	Quassel Core	Estimated time:	0.00 hour
Target version:	0.3.1		
Version:	0.13.1	OS:	Any

Description

This happens every few weeks with our core. One of the sessions goes into an endless loop, spitting this on the console:

```
SignalProxy::receivePeerSignal(): received incompatible Data: QVariant(, )  
received corrupted compressed data: 0 "" 0 QSslSocket(0x181e190)  
qUncompress: Input data is corrupted
```

Last time this happened to me, I was sitting on the train with a very slow, flaky connection while trying to attempt to sync with the core. Maybe an empty string coming from the socket is not handled correctly?
