

Quassel IRC - Bug #974

UI is incorrect when setting up backend fails on setup of core

05/26/2010 01:08 PM - lozzd

Description

When setting up a new PostgreSQL backend on a new core, I accidentally left the database not listening, so the setup failed. The setup UI wizard then showed me the following window:

<http://denness.net/grb/IUnlbPS.png>

In the bottom left "Core configuration failed: Could not setup storage! Press Next to start over." but the dialog only has "< Back" and "Finish" buttons, both greyed out. The only option is to click the close button on the wizard, which forces the core to think it can't use the Postgres backend forever and you have to restart the core to get the option of setting it up back, even if you restart the wizard on the client.

History

I confirm this behavior for quassel-core 0.10 (Ubuntu).

I, too, get "Could not setup storage!" (sqlite storage though) and both back and finish buttons are greyed out.
